

June 15, 2010

Dear Senate Judiciary Committee:

I am writing today to encourage you to vote YES on Senate Bill 1283, sponsored by Senator Wayne Kuipers.

S.B. 1283 amends the existing prolife law that requires women undergoing an ultrasound examination prior to an abortion to be given the opportunity to see a live image of the baby on the screen and receive a print out of the image. S.B. 1283 requires that the abortion clinic must use the most up-to-date ultrasound machine they have on the premises when conducting this ultrasound examination.

Citizens for Traditional Values and the Michigan voters we represent believe that life is precious from conception until natural death. We very strongly support any effort to enhance the pro-life process and to allow a woman to have one more source of information when considering her choice.

According to Right to Life of Michigan, there has been some anecdotal evidence that abortion clinics are maintaining very old ultrasound machines which provide very blurry images of the baby when showing the woman. If a woman has a right to choose, shouldn't she have access to the much newer machines available for use during the preliminary abortion choice?

Please contact me for any further questions via this information james@ctvmichigan.org or 517-321-1390.

Thank you for what you are doing for the defense of the sacredness of life. Please vote YES on this legislation.

Sincerely,

James Muffett

President

Citizens for Traditional Values
